For Immediate Release:

## **Technology Pathways releases ProDiscover Version 3.5**

***Key enhancements include thumbnail graphics viewer, registry viewer, Linux file system support and Linux Boot Disk..***

Coronado, Ca, Oct 7, 2004

Technology Pathways, LLC today announced the latest version of its successful forensics software product, ProDiscover Release 3.5. This new release adds significant new functionality to ProDiscover to enhance its utility and adds features not found in other forensics software packages.

“With the addition of Linux ext2 and ext 3 file systems to the existing Windows and Unix file system capability, ProDiscover is one of the most comprehensive solutions in the market today” said Christopher Brown, Chief Technical Officer of Technology Pathways. “And with the addition of exclusive capability to extract ExIF information from JPEG files to help identify the JPEG origin, ProDiscover expands its unique differentiation in the market” concluded Mr. Brown.

Other new features include the addition of a Linux Boot Disk to enable investigators to preview and image a system hard drive without removing the disk from the system, and two new integrated data viewers for easy access to graphics files and the system registry. The thumbnail graphics viewer makes it easy to quickly examine all graphics images on a system to check for illegal files, while the registry viewer allows examiners to quickly find key system information contained in the system registry.

Release 3.5 is expected to begin shipping in October and will be provided free to all existing customers with software maintenance contracts.

Founded in 2001, Technology Pathways, LLC is a leading edge provider of computer and network security tools and services for the Corporate IT, government, education, and legal communities. The ProDiscover® family of products provides affordable software solutions in the areas of computer forensics, incident response, system auditing, internal investigations and electronic discovery.
