

For Immediate Release:

ProDiscover[®] Release 6.0 adds indexing and improved searching capability.

New features provide significant speed and power increase for forensics searches.

Coronado, Ca, August 24, 2009 -- Technology Pathways, LLC, a leading provider of incident response and computer forensics solutions for the corporate IT, government and legal communities, today announced ProDiscover Release 6.0, with the ability to create and search indexes of images and to search utilizing regular expressions.

“These enhancements will save examiners significant time while working cases.” said Christopher Brown, CTO of Technology Pathways. “Once an index is created, search results are returned in seconds instead of hours.”

In addition, ProDiscover Release 6.0 now supports regular expression searches, allowing examiners more flexibility to search for items such as social security numbers, credit card numbers, or bank account numbers. This makes it even easier for the forensic examiner to see if a computer has been used for identity theft or other fraudulent activities.

“This new release makes it faster and easier than ever to use ProDiscover for many civil and criminal cases in a live environment?” states Anthony Reyes, President of The ARC Group of New York, and a former NYPD cyber crime investigator.

ProDiscover Release 6.0 also brings new capability to image or directly preview a remote systems volume shadow copies. ProDiscover is the first tier one forensics tool to provide this powerful feature allowing investigators to effectively look-back-in-time on suspect systems.
